

Data protection is business protection. Is your business vulnerable?

With Eagle Backup Assessment services, our engineers assist you in developing and deploying a data protection plan to meet your specific business requirements. Our service provides a detailed discovery report documenting potential problem areas and your current state of recovery readiness. Based on our findings, we provide recommendations and available options to maximize the efficiency of your backup and disaster recovery systems.

Eagle Backup Assessment Services

- Ensure backup windows are met
- Ensure all data and applications are backed up and can be easily and/or granularly restored
- Establish backup performance benchmarks
- Identify potential points of failure
- Recommend new technologies to manage backup challenges and utilize existing resources whenever possible

Documentation and Deliverables Provided

- Determination of best practices and documented guidelines for backup and recovery procedures
- Assistance with backup policy and procedure documentation specific to your business needs
- If deemed necessary, Eagle will provide a solution, along with a road map for implementation
- Assistance with planning for future growth, applications and challenges

An Eagle Backup Assessment ensures that you've identified and resolved problems in your backup environment, and are equipped with procedures and technology solutions for a foolproof plan. The result is an optimized data protection and recovery infrastructure that adds increased business value to your organization.
