

When your bottom line depends on uptime  
a tried and true disaster plan is essential.

Whether you need to implement a disaster recovery (DR) plan because you are part of a regulated industry or because it is simply good business practice, we can help. Eagle offers Disaster Recovery Planning to help you understand the business impact a disaster can have on your organization, and determine the best strategy to verify critical data is secure in the case of an outage.

Our process involves meeting with your organization to discuss your business goals and priorities. We also provide education on the technologies and services that are available to address your needs. We can prepare detailed solution designs, product specifications, and project plans, as well as implement, document and test your DR solution.

#### DR Planning services from Eagle

- Identification of business critical applications and services
- Determination of tiers for your services
- Choosing DR technologies that meet recovery objectives and budget
- Documentation in the form of a formal DR plan
- Guidelines for plan maintenance and testing

In addition, if you have an existing DR plan, we can assist with testing and evaluation to verify your plan meets your current needs.

Eagle DR Planning ensures that you've got the technologies and processes in place to recover from any outage according to plan. The result is a specified plan, unique to your business requirements, that provides an actionable process and deliverable documentation for legal teams as well as management.
